Define the Problem Statements

Date: 3 November 2025

Team ID: NM2025TMID07720

Project Name: CRM Application for Jewel Management (Developer)

Maximum Marks: 2 Marks

Customer Problem Statement Template:

Jewelry businesses face issues in managing customer relationships, inventory, and sales records efficiently. Manual management leads to data duplication, missed follow-ups, and delayed responses to customers. This impacts both customer satisfaction and store profitability. Without a centralized CRM system, tracking jewelry stock, managing customer histories, and analyzing sales trends become complicated and time-consuming.

A CRM application designed for jewel management will unify these processes. It will allow staff to track jewelry stock, record customer interactions, and automate sales reports. This solution enhances efficiency, ensures data accuracy, and helps in building strong relationships with customers through personalized engagement.

Example:

Problem Statement (PS) | I am (Customer) | I'm trying to | But | Because | Which makes me feel

PS-1 | Store Manager | Track stock and customer data | records are not centralized | data entry is manual and time-consuming | frustrated and uncertain

PS-2 | Sales Executive | Manage customer engagement | customers are not followed up properly | there is no reminder or tracking system | disappointed and less confident

Problem Statement PS 1:

As a store manager, I am trying to monitor stock and customer details efficiently, but manual tracking leads to missing data and duplication errors. This makes me feel frustrated and uncertain about inventory accuracy. I need a CRM system that updates stock automatically after every sale and provides easy access to customer details in real time.

Problem Statement PS 2:

As a sales executive, I want to maintain continuous communication with customers to build long-term relationships. However, without an automated CRM system, I miss follow-up opportunities and fail to remind customers about offers or events. This makes me feel less productive and disappointed. A jewelry CRM that automates customer tracking and reminders will improve sales engagement and ensure better customer retention.
