

Ideation Phase

Empathize & Discover

Date: 3 November 2025

Team ID: NM2025TMID07720

Project Name: CRM Application for Jewel Management (Developer)

Maximum Marks: 4 Marks

Empathy Map Canvas:

In the Empathize & Discover phase, the team explored how jewelry store owners, sales staff, and customers interact with existing management systems. Many users expressed frustration with the lack of centralized tracking for sales, customer details, and inventory. Manual methods, such as registers or spreadsheets, often lead to errors, missing data, and difficulty managing customer relationships.

By conducting interviews and observing jewelry shop workflows, the team discovered that most stores struggle to handle customer follow-ups, track product availability, and maintain personalized service. These issues impact sales performance, customer satisfaction, and operational efficiency. A CRM solution tailored for jewelry management can address these challenges.

The empathy map helped us understand the daily struggles of jewelry store teams and customers. It highlights their pain, actions, and needs for a more connected, automated, and transparent system. This guided us to design a CRM solution that simplifies store operations, enhances customer engagement, and boosts sales tracking efficiency.

By deeply understanding the users through empathy mapping, we identified key challenges such as inaccurate stock data, difficulty managing customer preferences, and lack of automated communication. As a result, we designed a smarter CRM application that integrates real-time inventory tracking, personalized customer profiles, and sales analytics. This ensures better decision-making, increased productivity, and stronger customer relationships within jewelry businesses.
