

Project Design Phase

Proposed Solution

DATE	TEAM ID	PROJECT NAME	MAXIMUM MARKS
03 NOV 2025	NM2025TMID07720	CRM Application for Jewel Management(Developer)	4 Marks

Proposed Solution Template:

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Jewelry stores face challenges in managing customer data, inventory, and billing efficiently. Manual processes often cause data duplication, delays, and communication gaps, reducing overall business performance.
2	Idea / Solution Description	The proposed CRM Application for Jewel Management automates customer tracking, billing, and inventory management through Salesforce. It provides a single platform to manage orders, generate invoices, and monitor customer history in real time.
3	Novelty / Uniqueness	The solution uniquely integrates customer relationship features with jewelry stock management, billing, and analytics within a single CRM environment, using Salesforce tools like Apex, Flows, and Process Builder.
4	Social Impact / Customer Satisfaction	The system enhances transparency and customer trust by offering timely service, automated notifications, and

		personalized interactions. It helps staff provide faster and more accurate responses to customer needs.
5	Business Model (Revenue Model)	While designed for internal business efficiency, the CRM platform can be customized for multiple jewelry chains, enabling subscription-based services for jewelers seeking digital transformation.
6	Scalability of the Solution	The application can be scaled to include predictive analytics, AI-based customer recommendations, and multi-branch management in future iterations.

Solution Description:

The CRM Application for Jewel Management offers a unified system to manage customer data, sales, and inventory. Developed on the Salesforce Cloud Platform, it automates daily operations such as billing, communication, and order tracking. This solution provides accurate insights into sales performance and customer preferences while maintaining data consistency across all modules. It ensures faster service, reduces manual errors, and enhances business growth through effective customer engagement.
