Data Flow Diagrams

A Data Flow Diagram (DFD) is a graphical representation that illustrates how customer and transaction data flows through the Jewel Management CRM system.

The DFD for this project depicts how customer interactions, sales orders, jewelry inventory, and service requests are processed, tracked, and updated in real time across the CRM modules.

In the Jewel Management CRM, the DFD focuses on modules such as:

- Customer Registration and Management
- Sales and Invoice Processing
- Jewelry Inventory Tracking
- After-Sales Services (Repairs, Custom Orders, Cleaning)
- Customer Communication and Follow-up

Example Flow Explanation:

1. A Sales Executive registers or updates customer data.
2. The CRM System validates and stores the data in the Customer Database.
3. When a Sale Order is created, the system checks the Inventory Database for item availability.
4. The Finance Module generates an invoice and updates the Transaction Database.
5. The Manager receives a summary report for analytics and CRM insights.

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Sales Executive	Customer Management	USN-1	As a sales executive, I want to register new customers and record their jewelry preferences.	The system must store customer data, purchase history, and preference details	High	Sprint-1

				securely.		
System (Auto-check)	Data Validation	USN-2	As a system, I must validate customer information (e.g., duplicate phone/email) before saving.	Duplicate entries are rejected; only unique customer profiles are stored.	High	Sprint-1
Inventory Manager	Stock Tracking	USN-3	As an inventory manager, I want to track jewelry stock levels and get alerts when stock is low.	The system generates alerts for low stock and synchronizes real-time inventory updates.	High	Sprint-2
Finance Officer	Invoice & Payment Management	USN-4	As a finance officer, I want to generate invoices and record payments linked to each sale.	The CRM should automatically calculate totals, taxes, and generate printable invoices.	Medium	Sprint-2
Manager	CRM Reporting & Analytics	USN-5	As a manager, I want to view sales performance and customer engagement reports.	The dashboard displays KPIs such as total sales, top customers, and conversion rates.	Medium	Sprint-3
Customer	Service Requests	USN-6	As a customer, I want to request repair or customization services through the CRM portal.	The system logs requests and notifies the service team automatically.	Low	Sprint-3
