

Project Design Phase-II

Technology Stack (Architecture & Stack)

Date	Team ID	Project Name	Maximum Marks
03 NOV 2025	NM2025TMID07720	CRM Application for Jewel Management(Developer)	4 Marks

Technical Architecture:

The deliverable includes the architectural diagram and detailed information as per the following tables.

Example: CRM Application for Jewel Management helps manage customers, jewelry stock, orders, billing, and communication through a centralized system.

Reference : https://en.wikipedia.org/wiki/Jewelry_management_system

Guidelines:

- Include processes such as customer management, inventory management, and billing logic.
- Provide infrastructural demarcation (Local / Cloud).
- Indicate external interfaces (payment gateway APIs, email/SMS services).
- Indicate data storage components (databases, files).
- Indicate interface to analytical or reporting modules (if applicable).

Table-1 : Components & Technologies:

S.No	Component Description	Technology
1	User Interface	Admin and staff access via Salesforce CRM Web UI / Lightning App
2	Application Logic-1	Customer registration and management handled through Salesforce Flows and Apex Controllers
3	Application Logic-2	Jewelry item and stock management logic implemented in Apex Classes
4	Application Logic-3	Order placement, tracking, and billing processes automated using Process Builder / Flows
5	Database	Stores customer, item, order, and payment data
6	Cloud Database	Managed by Salesforce Cloud Platform (multi-tenant architecture)
7	File Storage	Stores invoices, receipts, and product images in Salesforce Files
8	External API-1 (Optional)	Integration with payment gateways or vendor systems using REST APIs
9	External API-2	Integration with SMS or email notification services
10	Machine Learning Model	Optional for predictive analytics or sales forecasting (future enhancement)
11	Infrastructure (Server / Cloud)	Hosted and managed on Salesforce Cloud (SaaS platform)

Table-2 : Application Characteristics:

S.No	Characteristics Description	Technology
1	Open-Source Frameworks	-
2	Security Implementations	Salesforce Security Model
3	Scalable Architecture	Salesforce Multi-Tenant Cloud
4	Availability	Load-balanced Salesforce Instances
5	Performance	Apex, SOQL Optimization
